salt being one of the few items that the hill people used to carry up from market towns on the plains during their annual trading expeditions.[6] We may perhaps infer that the salt-giving was already a ceremony from the tradition that the men in these parties who were carrying salt specifically to give to their buffaloes were supposed to keep themselves in a ritually pure state, and were not allowed to carry any other trade items at the same time. One man would therefore carry salt for a number of men in the trading party, and they in turn would carry his purchases. Salt intended for domestic use was never treated with such reverence. Once a market had been established in the new British hill town of Ootacamund, *ca.* 1825, these old trading expeditions fell into abeyance because the Badagas could then purchase salt without having to leave the hills.[6]

The annual ceremony of giving "new-grass salt," called *'ka:ruppu,* is performed separately by each hamlet in March of every year, on the Monday that falls within the eight days following the new moon. At about the time of the new moon itself one man is selected from every household in each hamlet to represent that family; generally the head of the family assumes the role, unless the purificatory preparations are too burdensome for him.

Early in the morning of the ceremony, after the house has been purified, each of these men goes out to his cattle shed and brings in the salt he has purchased. This coarse salt is then powdered in a mortar inside the house with a special iron bar supplied by the Kota craftsmen.

At the appropriate time the hamlet headman comes along each street calling out, "Are you ready?" Each celebrant then picks up his powdered salt in its basket[7] and stands near the doorway. At a signal from the headman, the man who represents the Great House (i.e., that of the hamlet's founding family) is the first to leave his doorway. He goes and stands on the village green, and all of the other men selected immediately come out and line up behind him. They then start off for the stream where the salt-feeding will take place. The man from the Great House stays in the lead. At some distance behind this party of celebrants other members of their families follow, driving the cattle or just coming along to watch; but no women can be present.

This group goes to the bank of a stream near the hamlet, carrying their baskets of salt, iron rods, pots, and hoes. Near the stream the man from the Great House digs a shallow, round hole with his hoe, two to three feet wide and a foot deep. The other men then follow suit, each using his own hoe to dig a hole for his own cattle. During the present century, however, the Badaga cattle herds have become much smaller than before, and so only one man from each lineage is usually selected to dig a pit for all the cattle belonging to that lineage. (Generally a Badaga hamlet is made up of three or four lineages, one at least of which is recognized as having descended from the hamlet founder.) After each of these pits has been dug, the loose dirt in it is brushed out with a branch of the *'hubbe* plant.[8]

The sun is now in the east, for it is still morning. When the pits have been dug, the man from the Great House takes a handful of salt from his

But no great change has come in salt-giving and the other important rituals of either the Badagas or the Todas. Indeed, only one general change is apparent in recent performances of the traditional ceremonies: they are done with a minimum of wasted time. Now that Badagas and even some Todas have become involved in the marketing economy, they have less time to spend idly, since time now means income. They tend to perform ritual acts with some haste, and they do not always feel concerned if a minor item in the ritual sequence is altogether omitted from a particular performance. Public opinion still favors as authentic a performance as possible, however, for the relationship between the continued performance of the rituals and the continuance of the social order is even today believed to be a real and crucial one.

Wallace's contention that rituals do not have an information function has, we hope, been qualified by this paper. The kind of information which a ritual such as salt-giving presents is information not available from any other source, whether mass media or traditional oral channels. Neither government nor gossip can reassure a community on the matter of its continued existence as a community; only the periodic re-enactment of roles and the reassertion of traditional values in the indigenous ceremonies of a culture can give Badagas, Todas, and other rural communities the security of knowing that their own particular way of life is both persistent and worthwhile.

NOTES

1. I am indebted to the American Institute of Indian Studies for a fellowship which enabled me to do field research there in 1962-63. The present paper has been written with the help of a grant from the Chancellor's Committee on International and Comparative Studies, University of California at Los Angeles. I am also grateful to M. N. Thesingh, a Badaga Lingayat who provided much of the material, and to John Hitchcock for his helpful criticism.

2. Terracing of slopes and the fragmentation of fields through divided inheritance have resulted, since the 1930s, in fields being too small to plough.

3. Numbering 85,463 persons in the 1961 Census.

4. During the past fifty years some hamlets have included the salt-giving ceremony in their sowing festival. This is convenient because it saves some time and expense on preparations; yet the two ceremonies remain quite distinct from one another.

5. Large groups of Badagas and Kotas used to go together to the market town of Gundlupet in southern Mysore, or to Karamadai, near Coimbatore. They carried hay, honey, opium, and clarified butter with them, and bartered these for salt, crude sugar, rice, coconut, tobacco, and trinkets.

6. Initially trade in the Ootacamund bazaar was handled through barter, but by about 1840 cash had become the general medium.

7. Called *'uppu kuk'kɛ*, "salt basket," this is made of cane by the Todas, stands about nine inches high (including the loop handle), and is smeared inside and out with cow dung.

8. The term *'hubbe* is used for six species of Leguminosae found at varying altitudes on the Nilgiri Hills. These are (1) the hill forest indigo; (2) the New Spain senna; (3) the tick trefoil; (4) the bell pea or Chinese pagoda tree; (5) *Dumasia villosa;* and (6) mountain downy senna.

9. Otherwise known as bastard mango or honeysweet tree.
